Modern South Asia Conference in Heidelberg

At the end of this summer the South Asia Institute of the Ruprecht-Karls-Universität Heidelberg, Germany, hosted the European Conference on Modern South Asian Studies, the seventeenth in a series of biennial conferences. Through the years this conference has become an important platform in Europe for the exchange of results of research on modern South Asia.

By Netty Bonouvrié

The conference coincided with the fortieth anniversary of the founding of the South Asia Institute, which consists of eight departments and has become a major centre for interdisciplinary research. Results of interdisciplinary research were rendered visible by means of the exhibition Benares. Views of a Holy City at the Völkerkunde-museum of Heidelberg, which could be visited by a guided tour (for more information see the article by Martin Gaenssle and Jörg Gengnagel on the next page).

Considering the number of participants and the increase of contributions, this conference was certainly successful. The next European Conference on Modern South Asian Studies, to be hosted by SASNET (Swedish South Asian Studies Network) and Lund University, will be held from 6 to 9 July 2004 in Lund, Sweden.

"Tribe’s Transitions" is a collaborative project between the School of Oriental and African Studies, the British Museum, Arunachal University, the government of Arunachal Pradesh, the Centre for Cultural Research and Documentation (Arunachal Pradesh), the Monpa Research Project and SASNET (Swedish South Asian Studies Network). The project is funded by the Economic and Social Research Council, United Kingdom, runs from October 2002 to October 2007.

By Stuart Blackburn

Although Arunachal Pradesh has been isolated by mountainous terrain and by government policy, which have prevented absorption into mainstream culture, trade links with Tibet and the plains have always brought new objects and ideas – today brought by television, education, and better roads. Cultural change is apparent everywhere: textile designs of one tribe are borrowed by others; local festivals are centralised and re-fashioned as community events; oral traditions are printed and discussed as ‘cultural heritage’. Some traditional practices (such as tattooing) have been banned by tribal organisations, while others (e.g. woodcarving) are undergoing expansion. Perhaps the most fundamental change is that animistic beliefs and rituals are undergoing formalization into a religion with new visual images, places of worship, and a formal theology. This systematization of the worship of Donyo-Pulu (Sun-Moon) places it alongside the other religions known in the area: Christianity, Buddhism, Hinduism and ethnic religions. Ritual practitioners have also formed a self-identified association of shamans. These changes are fast-paced and largely undocumented.

In analysing change, the research will challenge deep-rooted perceptions of tribal cultures as antedotes to modernity. The impulse to romanticise ‘indigenous peoples’ is still a powerful force in scholarship and public debate, not only in the West but also in urban India. In order to shift the focus from preservation to innovation, the research will be based on a range of writings that historicize tribal culture and theorize tradition as re-invention. Primary among these are anthropological critiques of the ‘primitive’, a notion which places tribal culture either in a timeless present or a vanished past. Also valuable are studies of historical change in tribal cultures, either through regional networks of trade or from adaptation to economic and environmental conditions. While these processes operate in Arunachal Pradesh, the research will approach change as more than passive adaptation and more as innovation, especially in expressive culture. We will utilise the concept of the ‘invention of tradition’, first described by historians. Although typically applied to public traditions in large states, we believe the concept is applicable to small-scale societies as well. Folklorists have likewise contributed to this reinterpretation of tradition and to the emphasis on the inventiveness of culture by developing the concept of ‘second-hand folklore’ to describe conscious reinterpretation of tradition.

We will also draw on new research that views objects not as static artefacts or bearers of meaning but as sites of cultural practice and history. In a study similar to the proposed research, for example, Gosden and Knowles (2001) have demonstrated that the juxtaposition of museum collections and fieldwork yields original insights into cultural change over time. Finally, we will draw selectively from the growing literature on ‘indigenous peoples’. Although this literature often sacrifices accuracy for advocacy, it does contain valuable case studies of change among tribal groups. The project involves both fieldwork and archival study. Fieldwork will concentrate on three domains (ritual practices, oral narratives and histories, and material culture) among four tribes (Apatani, Adi, Monpa, and Idu Mishmi) using a variety of methods. By observation, photography, filmmaking, and audio taping we will document current practices; by interviewing and by showing (copies of) archival photos, we will elicit commentary on change. We will also produce a series of four films, one on each tribe, documenting the ways in which each group defines and displays its identity. Wherever possible, we will study events and objects already documented in the historical record; a festival filmed in 1995, for example, may be filmed again in 2003. Archival study will concentrate on major collections in the United Kingdom and India; photographs and films will help to establish a baseline from which change can be measured; objects will be examined for evidence of changing uses and interpretations. Finally, we will repatriate approximately 120 photographs to Arunachal Pradesh.

The planned outcomes of the research are:

– an exhibition in India, originating in Arunachal Pradesh and travelling to other cities;
– an exhibition at the British Museum;
– four documentary films;
– an extensive collection of photographs;
– monographs on oral traditions, religious life, and material culture in Arunachal Pradesh;
– a photographic essay on cultural change in the state;
– a volume of essays from an international conference at Arunachal University.

Through the public dissemination of results, both in India and the United Kingdom, the project hopes to contribute both to our knowledge of tribal cultures and to the debate concerning their place in the modern world. The project will soon have a website probably ‘tribaltransitions’ on the main SOAS website.

Dr Stuart Blackburn is senior lecturer in folklore and Tamil Studies at SOAS, London. His research interests are oral traditions in performance, literary history, oral history, and northeast India in general. sb@soas.ac.uk
